Trucks Dispatching Schedule

Overview

- Data Inputting
- Implementation Detail
 - o Create Data
 - o Build Model
 - o Solve Model
- User Satisfaction Concern

Data Input

- Number of truck types
- Number of warehouses
- Number of trucks for each type
- Loading capacity for each type

Implementation – Strategy

Sub truckpickup()

Dim c As Range, numTruck As Range, numUnits As Range

Dim TotalUnits As Integer 'An integer variable to store the total number of items from all warehouses

Dim numType As Integer 'An integer variable to store the total number of types of trucks

Dim numwarehouse As Integer 'An integer variable to store the total number of warehouses

Dim Base As Range 'Set the upper left cell of the Matrix as the base cell

Call CreateData(c, numTruck, numUnits, TotalUnits, numType, numwarehouse)

Call buildModel(c, numTruck, numUnits, TotalUnits, numType, numwarehouse, Base)

Call SolveModel(Base, numTruck, numType, numwarehouse)

End Sub

Implementation – Create Data

Range Variable

- Number of trucks for each truck type
- Number of unites available at each warehouse
- Loading capacity for each truck type

Variable Initialization

- The matrix of variable (Tij), number of trucks of each type sending to each warehouse
- Yj, number of units picked up at each warehouse j

Implementation – Create Data

Sub CreateData(ByRef c As Range, ByRef numTruck As Range, ByRef numUnits As Range, _ ByRef TotalUnits As Integer, ByRef numType As Integer, ByRef numwarehouse As Integer)

'Get the number of types of trucks again for later use, Here we count the serial number generated by Macro GetReady_which will surely be correct.enabling us to use end(XIToRight). Columns.count numType = Range(Cells(2, 2), Cells(2, 2). End(xIToRight)). Columns. Count

'Get the total number of warehouses again for later use_Same as abovee numwarehouse = Range(Cells(12, 1), Cells(12, 1).End(xIDown)).Rows.Count

Set numTruck = Range(Cells(3, 2), Cells(3, 1 + numType)) 'Create a range for all types of trucks

Set c = Range(Cells(4, 2), Cells(4, 1 + numType)) 'Create a range for all capacity of all types of trucks

Set numUnits = Range(Cells(12, 2), Cells(11 + numwarehouse, 2)) 'Create a range for all items of all warehouses

Implementation - Create Data

```
'A nested loop to fill in 0 in the Matrix, So as to initialize
Dim W As Integer, T As Integer, Base2 As Range
Set Base2 = Cells(11, 7)
For W = 1 To numwarehouse
   For T = 1 To numType + 2
     Base2(W, T) = 0
   Next T
Next W
Cells(13 + numwarehouse, 1) = "Total" 'Create a title
'Calculate the sum of all available items. Store the result in variable "TotalUnits"
For j = 1 To numwarehouse
  TotalUnits = TotalUnits + Cells(11 + j, 2)
Next i
Cells(13 + numwarehouse, 2) = TotalUnits 'Display the total number of units in all warehouses
```

Implementation – Build Model

- Construct variable matrix
 - o For number of trucks of each type sending to each warehouse
- Set formula
 - SUM to get Yj, number of units picked up at each warehouse j
 - SUM to get Ti, total number of trucks dispatched for each truck type i
 - SUMPRODUCT to get ci*Tij, total capacity of trucks dispatched to each warehouse j
- Construct objective cell
 - SUM to get total Y as objective value

Implementation – Build Model

```
Set Base = Range(Cells(11, 7), Cells(11, 7).Offset(numwarehouse - 1, numType - 1))

'Put the formula for calculating the total capacity of trucks sent to each warehouse at the end of each row refering to each warehouse Dim i As Integer

For i = 1 To numwarehouse

Base(i, numType + 2).Formula = "=Sumproduct(" & c.Address & "," & Range(Base(i, 1), Base(i, numType)).Address & ")"

Next i

'Put the formula for suming up Tij under each column refering to each type of truck i

Base(numwarehouse + 1, 0) = "Each"

Base(numwarehouse + 2, 0) = "Total"

For j = 1 To numType

Base(numwarehouse + 2, j).Formula = "=SUM(" & Base(1, j).Address & ":" & Base(numwarehouse, j).Address & ")"
```

Next i

'Creates a two dimensional range

Implementation – Build Model

'Calculate the remaining items of each warehouse

Implementation – Solve Model

- Record Solver solving process and Solver option setting
 - To ensure an integer solution within tolerance
 - To ensure a acceptable run time
- Generalize the cells' address so as to fit on our model

Implementation – Solve Model

```
Sub SolveModel(ByRef Base As Range, ByRef numTruck As Range, ByVal numType As Integer, ByVal numwarehouse As Integer)
  'Asign the Obj.Func.Cell
  Dim ObjectiveCell As Range
  Set ObjectiveCell = Base(numwarehouse + 4, numType + 1)
  'A range refering to all variable cells
  Dim Var As Range
  Set Var = Range(Base(1, 1), Base(1, 1), Offset(numwarehouse - 1, numType))
  'Number of each type truck i sent
  Dim Tij As Range
  Set Tij = Range(Base(numwarehouse + 2, 1), Base(numwarehouse + 2, 1), End(x|ToRight))
  'Number of each type of truck available(Ti)
  Dim Ti As Range
  Set Ti = Range(numTruck(1, 1), numTruck(1, 1).End(x|ToRight))
  'Number of trucks sent to warehouse i
  Dim Yi As Range
  Set Y_j = Range(Base(1, numType + 1), Base(1, numType + 1).End(x|Down))
  'Number of available items in each warehouse
  Dim Di As Range
  Set Dj = Range(numTruck(10, 1), numTruck(10, 1).End(xlDown))
  'Theoretical capacity
  Dim CiTij As Range
  Set CiTij = Range(Base(1, numType + 2), Base(1, numType + 2).End(xIDown))
  'Range for the Tij variables only
  Dim TijOnly As Range
  Set TijOnly = Range(Base(1, 1), Base(1, 1).Offset(numwarehouse - 1, numType - 1))
```

Implementation – Solve Model

Click "Start" button to fill in the number of trucks type

and the number of warehouses as well

Then user will be asked to fill in all scheduling information

| Data | 1-12 | 0.000 | | 100 | | | | | | | | | | | | |

- Implementation Details
- Create another Macro to implement the "Start" button
 - Display the format to facilitate user fill in information
 - Include code for clearing all previous content before user start
- Close solver outcome box and inform user the solution details
 - If the solver can get optimal solution: "Optimal Solution Found"
 - Otherwise, "An integer solution found with tolerance"
- All information displayed is necessary and sufficient
- Clean and Concise
